

MISSION

The CRTO will establish a collaborative and integrative environment for the design and conduct of clinical research and clinical trials to advance preventive and therapeutic interventions benefiting the health of Iowans.

GOALS

Create a more complete, effective, user-friendly clinical research and trials office within the ICTS that can serve as a resource for all departments doing clinical research

Create a platform infrastructure for clinical trials research to address issues across multiple stakeholders and groups so that institutional goals for clinical trials are met or exceeded and issues are more effectively addressed

Current Infrastructure

Clinical Research Unit

Regulatory Submission

Coordinator Core

Biostatistics, Epidemiology and Research Design Core

Engagement, Integration, and Implementation Core

Recruitment Core, Volunteer Registries and TriNetx identification of UIHC research participants

Connection to CTSA Trial Innovation Network

Education and academic courses for clinical research and courses

Future Improvements

Integration of clinical trials components: IRB, regulatory, budgeting, multiple required clinical research committees

Improved workflow with improvements in the efficiency of clinical trial approval, design and conduct

Integrated and comprehensive data management for clinical trial administration and execution

Participation and collaboration of health science colleges and departments

Increased access to clinical trial expertise and services for design, conduct and dissemination/accrual

Creation of platforms catering to new investigators and new interventions

Development of a hub and spoke model
